Introduction

- Alzheimer's disease agitation (AD agitation) is reported in up to 70% of people with Alzheimer's disease and is characterized by emotional distress, aggressive behavior, disruptive irritability, and disinhibition^{1,2}
- AD agitation is associated with increased caregiver burden, decreased functioning, accelerated cognitive decline, earlier nursing home placement, and increased mortality^{3,4,5}
- Non-pharmacological therapies for AD agitation, while recommended as first-line therapy, are not always effective^{3,5}
- AXS-05 (dextromethorphan-bupropion) is a novel, oral N-methyl-D-aspartate (NMDA) receptor agonist, and aminoketone CYP2D6 inhibitor approved by the US FDA for the treatment of major depressive disorder in adults⁶

Methods & Study Design

ADVANCE-1 The ADVANCE-1 (Addressing Dementia via Agitation-Centered Evaluation 1; NCT03226522) study was a Phase 2/3 randomized, double-blind, controlled study to evaluate the efficacy and safety of AXS-05 in patients with AD agitation	ACCORD The ACCORD (Assessing Clinical Outcomes in Alzheimer's Disease Agitation; NCT04797715) study was a Phase 3, double-blind, placebo-controlled, randomized withdrawal study to evaluate the efficacy and safety of AXS-05 in	Table 1. ADVANCE-1 and ACCORD Key Inclusion / Exclusion Criteria		
Screening Double-blind Phase (5 weeks) AXS-05 (45 mg DM / 105 mg BUP, BID) N = 366 Bupropion n = 158 Placebo Dispequently patients were randomized in a 1:1 ratio to receive AXS-05 or placebo Bup Visione daily. BUP, Bupropion; DM, Dextromethorphan. Bup ropion Placebo BLD Primary endpoint: Change from baseline to Week 5 in the Cohen-Mansfield Agitation Inventory (CMAI) total score	the treatment of AD agitation 1:1 randomization of sustained clinical responders (n = 108) Period 2 Double-blind Up to 9 weeks Up to 26 weeks End of Screening BL1 Until sustained clinical Screening BL1 Until sustained clinical BL2 Until agitation relapse ^b Study AXS-05 (d5 mg DM/105 mg BUP, BID) Optional open-label study Optional open-label study Placebo (BID) Sustained response of 2 30% improvement from baseline in the CMAI total score and improvement on the PGI-C (score ≤ 3) that were both maintained for 2 4 consecutive weeks. ^AAgitation relapse defined as a 2 10-point worsening in the CMAI total score from randomization or a CMAI total score greater than that at study entry; or hospitalization or other institutionalization due to AD agitation. AD, Altheimer's disease; AD agitation, Altheimer's disease agitation; BID, twice daily; BL, baseline; BUP, bupropion; CMAI, Cohen-Mansfield Agitation Inventory; DM, destromethorphan; PGI-C, Patient Global Improvement from particular to the pgi-C (score score score score score greater than that at study entry; or hospitalization or other institutionalization due to AD agitation. AD, Altheimer's disease; AD agitation, Altheimer's disease agitation; BID, twice daily; BL, baseline; BUP, bupropion; CMAI, Cohen-Mansfield Agitation Inventor; DM, destromethorphan; PGI-C, Patient Global Improvement from particle Agitation Inventor; DM, destromethorphan; PGI-C, Patient Global Improvement from particle Agitation Inventor; DM, destromethorphan; PGI-C, Patient Global Improvement from particle Agitation Inventor; DM, destromethorphan; PGI-C, Patient Global Improvement for Arge.	InclusionExclusion• Age 65-90 years (inclusive)• MMSE score 10-24 (inclusive)^a• Predominantly non-AD dementia• Probable AD according to 2011 NIA-AA criteria7• NPI-AA score ≥ 4 • Community- dwelling (ADVANCE-1)• Predominantly non-AD dementia• Agitation symptoms not secondary to AD• Concurrent medical condition that may interfere with study conduct• Agitation according to IPA provisional definition ⁸ • Corcorent participation (ACCORD)		
 Dose titration: Week 1: AXS-05 (30 mg DM/105 mg BUP) once daily Week 2: AXS-05 (30 mg DM/105 mg BUP) twice daily Weeks 3-5: AXS-05 (45 mg DM/105 mg BUP) twice daily 	Primary endpoint: Time from randomization to relapse of agitation Key secondary endpoint: Percentage of participants who relapsed	^a An MMSE score ≤ 24 is generally used as indicative of cognitive impairment AD, Alzheimer's disease; IPA, International Psychogeriatric Association; MMSE, Mini-Mental State Examination; NIA-A National Institute on Aging - Alzheimer's Association; SNRI, Serotonin–norepinephrine reuptake inhibitor; SSRI, Selectiv		

Key Objective

To evaluate efficacy and safety of AXS-05 in patients with Alzheimer's disease agitation (AD agitation)

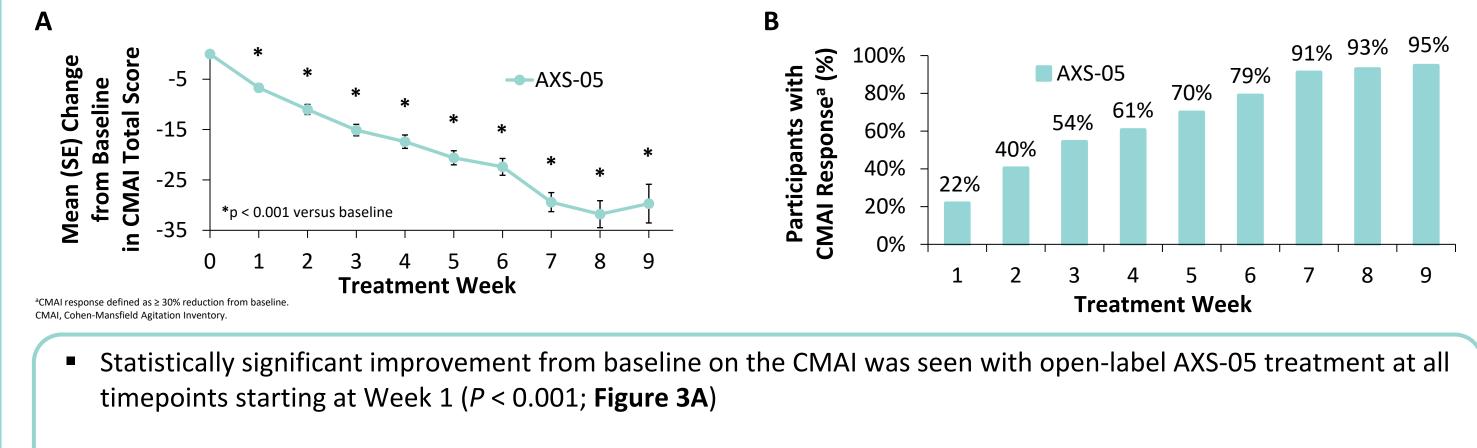

Conclusions

AXS-05 was associated with a substantial, rapid reduction in AD agitation compared with controls after 5 weeks of treatment

In ACCORD longer-term treatment with AXS-05 significantly increased the time to relapse of AD agitation and reduced the risk of relapse

ACCORD Efficacy

Figure 3. Open-Label Period CMAI Mean Change From Baseline (A) and Clinical Response (≥ 30% Reduction) on CMAI (B)

■ Clinical response (≥ 30% CMAI reduction) was observed in nearly 80% of participants by Week 6 (Figure 3B)

Patient Population

Key Findings

	ADVANCE-1			ACCORD		
				Open-Label Period	Double-Bind Period	
	AXS-05 (n = 152)	Bupropion (n = 49)	Placebo (n = 156)	AXS-05 (n = 178)	AXS-05 (n = 53)	Placebo (n = 55)
Age, years, mean (SD)	75.2 (5.71)	76.4 (6.13)	75.1 (5.96)	74.9 (6.0)	74.1 (6.0)	74.9 (6.2)
Female Gender, n (%)	86 (56.6)	22 (44.9)	91 (58.3)	95 (53.4)	27 (50.9)	30 (54.5)
Race, n (%) White Black or African American Asian Other	136 (89.5) 11 (7.2) 1 (0.7) 4 (2.6)	43 (87.8) 5 (10.2) 0 1 (2.0)	128 (82.1) 25 (16.0) 1 (0.6) 2 (1.3)	152 (85.4) 18 (10.1) 4 (2.2) 4 (2.2)	45 (84.9) 4 (7.5) 2 (3.8) 2 (3.8)	47 (85.5) 7 (12.7) 1 (1.8) 0
CMAI total score, mean (SD)	60.7 (17.40)	66.1 (19.65)	59.4 (15.60)	70.9 (22.3)	43.7 (10.2)	44.9 (10.9)
NPI-AA total score, mean (SD) ^a	7.2 (2.17)	6.9 (2.45)	6.8 (2.07)	7.0 (2.0)	4.1 (2.0)	3.6 (1.9)
CGI-S agitation, mean (SD)	4.2 (0.77)	4.4 (0.82)	4.2 (0.65)	4.3 (0.6)	2.7 (0.8)	2.9 (0.8)

AXS-05 was generally well tolerated across studies, further supporting the continued development of AXS-05 as a promising treatment option for AD agitation

Disclosures

J. Cummings has provided consultation to Acadia, Acumen, ALZpath, Annovis, Aprinoia, Artery, Axsome Therapeutics, Biogen, Biohaven, BioXcel, Bristol-Myers Squib, Eisai, Fosun, GAP Foundation, Green Valley, Janssen, Karuna, Kinoxis, Lighthouse, Lilly, Lundbeck, LSP/eqt, Merck, MoCA Cognition, New Amsterdam, Novo Nordisk, Optoceutics, Otsuka, Oxford Brain Diagnostics, Praxis, Prothena, ReMYND, Roche, Scottish Brain Sciences, Signant Health, Simcere, sinaptica, TrueBinding, and Vaxxinity pharmaceutical, assessment, and investment companies. He is supported by US National Institute of General Medical Sciences (NIGMS) grant P20GM109025, National Institute on Aging (NIA) grant R35AG71476, NIA grant R25 AG083721-01, the Alzheimer's Disease Drug Discovery Foundation (ADDF), the Ted and Maria Quirk Endowment, and the Joy Chambers-Grundy Endowment. G. Grossberg has provided consultation to Acadia, Alkahest, Avanir, Axovant, Axsome Therapeutics, Biogen, BioXcel, Genentech, Karuna, Lundbeck Otsuka, Roche, and Takeda. He has provided research support for Lilly, Roche, and the National Institute on Aging. He has served on a Speaker's Bureau for Acadia, Biogen, and Eisai and has served on Safety Monitoring Committees for Anavex, EryDel, IntracellularTherapies, Merck, Newron, and Oligomerix. **C. Streicher, C. Zeni,** and **H. Tabuteau** are current employees of Axsome Therapeutics.

^aNPI-AA total score n = 49 participants in both AXS-05 and placebo groups in the double-blind period

CGI-S, Clinical Global Impression – Severity; CMAI, Cohen-Mansfield Agitation Inventory; ITT, intent-to-treat; MMSE, Mini Mental state examination; NPI-AA, Neuropsychiatric Inventory – Agitation and Aggression domain.

Baseline and sociodemographic characteristics were generally similar across AXS-05 and control groups in their respective studies

ADVANCE-1 Efficacy

Figure 2. Change in CMAI total score (A), clinically meaningful improvement (B), and clinical response (C)

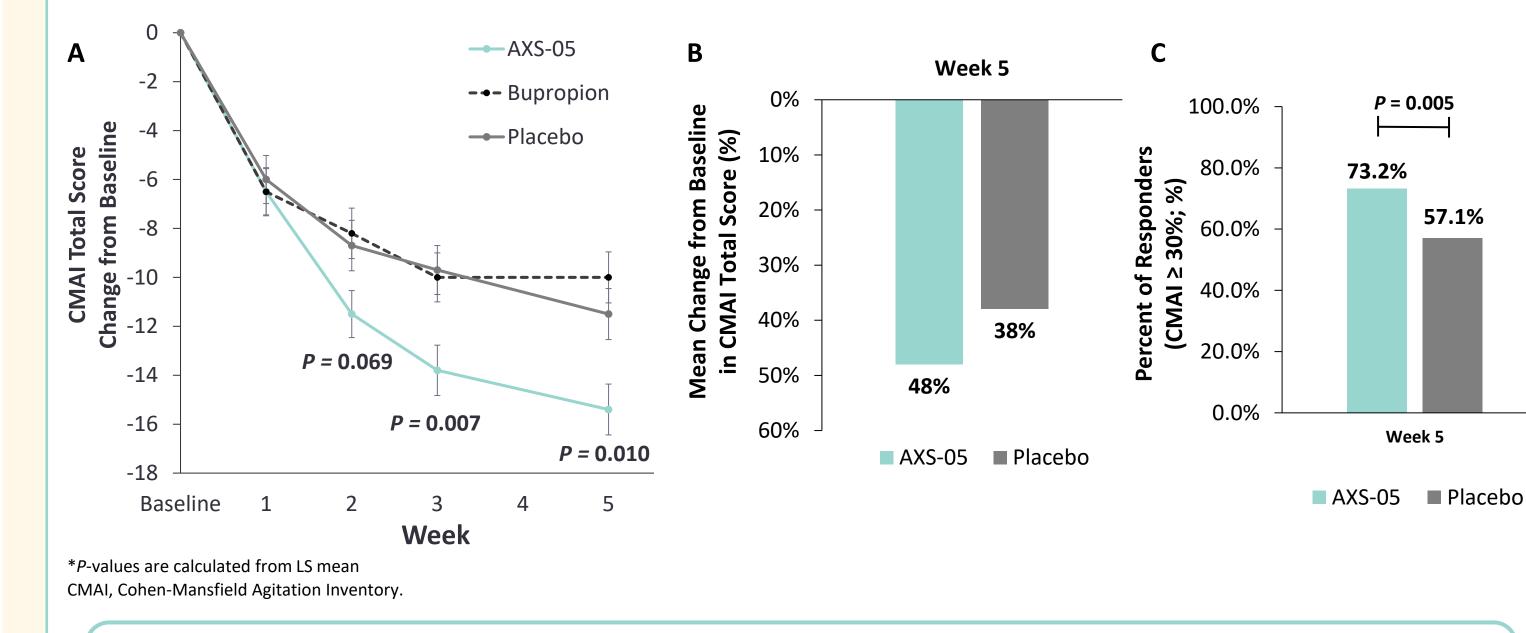

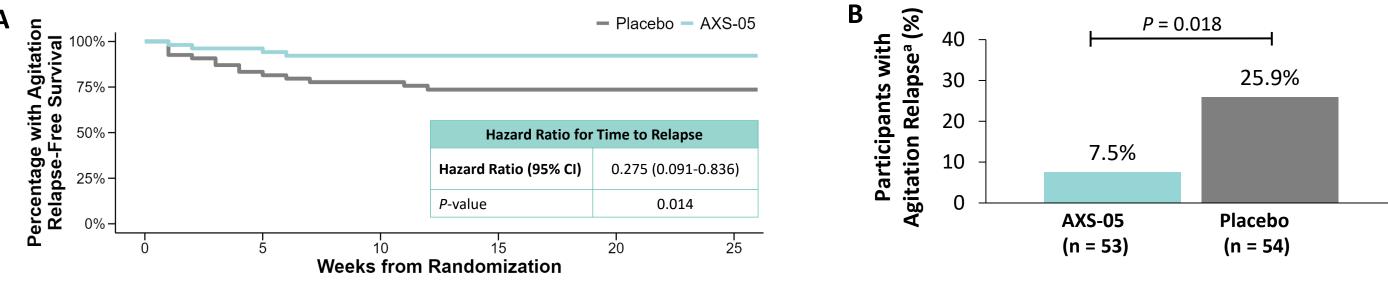

Figure 4. Double-Blind Period Kaplan-Meier Plot of Time from Randomization to Relapse of Agitation Symptoms (A) and relapse prevention (B)

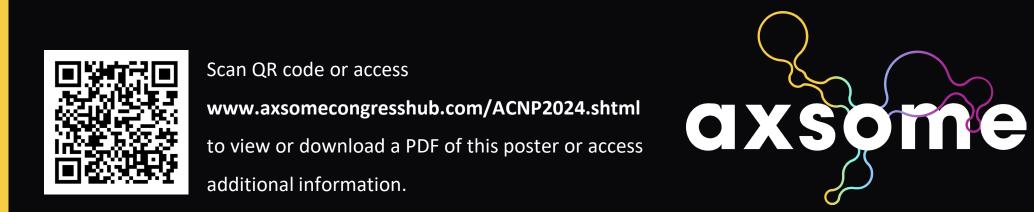

^aAgitation relapse defined as a ≥ 10-point worsening (increase) in the CMAI total score from randomization or a CMAI total score greater than that at study entry for 2 consecutive weeks CMAI, Cohen-Mansfield Agitation Inventory; mITT, modified intent-to-treat

• AXS-05 substantially and statistically increased the time to relapse of agitation symptoms compared with placebo (Hazard ratio, 0.275; P = 0.014; Figure 4A); risk of relapse was 3.6-fold lower with AXS-05 compared with placebo

• AXS-05 significantly prevented relapse compared with placebo (7.5% vs 25.9% of participants; *P* = 0.018; Figure 4B)

American College of Neuropsychopharmacology Annual Meeting, December 8 – 11, Phoenix, AZ

• AXS-05 demonstrated a statistically significant mean reduction in the CMAI total score compared to placebo at Week 5, with mean reductions from baseline of 15.4 points for AXS-05 and 11.5 points for placebo (P = 0.010); AXS-05 also demonstrated statistical separation from bupropion on the CMAI total score (*P* < 0.001; Figure 2A)

• At Week 5, AXS-05 reduced CMAI total score from baseline by a mean percentage of 48% for AXS-05 versus 38% for placebo (Figure 2B)

■ A statistically significantly greater proportion of patients achieved a clinical response (≥ 30% improvement from baseline) on the CMAI with AXS-05 as compared to placebo (73.2% versus 57.1%, P = 0.005; Figure 2C)

Safety Population includes all subjects who receive at least 1 dose of AXS-05. bDuring the ACCORD double-blind period, there were 3 (5.7%) and 2 (3.7) patients with drug-related TEAEs in the AXS-05 and Placebo arm, espectively. ^cDeath due to cardiac arrest MMSE, Mini Mental State Examination; TEAE, treatment-emergent adverse event.

In ADVANCE-1, the most commonly reported adverse events (AXS-05, bupropion, and placebo, respectively) in the AXS-05 arm were somnolence (8.2%, 4.1%, and 3.2%), dizziness (6.3%, 10.2%, and 3.2%), and diarrhea (4.4%, 6.1%, and 4.4%)

In ACCORD, the most frequently reported TEAEs in \geq 5% of patients in any arm (AXS-05 and placebo, respectively) were diarrhea (7.5% and 3.7%), fall (7.5% and 3.7%), and back pain (5.7% and 3.7%)

• Falls were reported in 4 participants in the AXS-05 group, none of which were related to study medication or associated with serious AEs, and in 2 participants in the placebo group, one of which was associated with a femur fracture
